Tailscale Hiring Team
Tailscale Inc.
Remote — Canada

March 30, 2026

Dear Hiring Team,

I am writing to apply for the **Software Engineer, Engineering Tooling** position at Tailscale. With a PhD in Computer Engineering (defending Summer 2026), production experience building CI/CD pipelines and developer tooling at Ericsson, and a deep interest in networking and security, I believe I can make a meaningful contribution to your engineering team.

CI/CD & Infrastructure as Code. At Ericsson, I designed and implemented a **7-stage CI/CD pipeline** (GitHub Actions + AWS CodeBuild with OIDC): test → OWASP security scan → CloudFormation infra → staging gate → deploy → smoke test → auto-rollback — with zero static IAM keys. I also built a fully autonomous retraining loop triggered by drift detection and scheduled via EventBridge, with automatic model promotion only when the new model outperforms production.

Developer Tooling & Testing. I authored **131 automated tests** enforced by an AST-based adaptive test guardian that ensures 100% production function coverage. I built an end-to-end event pipeline (S3 → Lambda → SQS → K8s worker → S3 → SNS alerts) and deployed it as a Kubernetes pod on EKS — the kind of internal tooling that lets a team ship faster and sleep better. At Intact Financial Corporation, I monitored data pipelines and developed automated testing solutions on PySpark, Databricks, Snowflake, and AWS.

Distributed Systems & Networking. My PhD research centres on AI-driven routing, carbon-aware networking, and zero-trust security for 6G sensor networks. One of my articles, CASTER-ZT, formalises a zero-trust shield with 10 propositions that guarantee no unauthorised node can actuate — a philosophy closely aligned with Tailscale's identity-first, zero-trust approach. I am comfortable reasoning about IP addressing, routing, NAT traversal, and distributed coordination.

Communication & Collaboration. I have taught the Python programming course at Polytechnique Montréal across two separate academic years, designed AI coursework at Université de Montréal, and presented at international conferences in Canada, Denmark, Cameroon, and Gabon — in both English and French. I thrive in asynchronous, writing-heavy environments and enjoy explaining complex systems to diverse audiences.

I have used Tailscale personally to access my home lab through Polytechnique's multi-NAT campus Wi-Fi, and I am a genuine fan of the product's simplicity. I would welcome the opportunity to help make every Tailscale engineer more productive through great internal tooling.

Thank you for your time and consideration. I look forward to hearing from you.

Sincerely,

Georges Parfait Djimefo Kapen
